

My portal Plugin

Version release24.09

Table of Contents

1. Some Portlet in other components	2
1.1. The System Event Portlet	2
1.2. The Calendar Portlet	2

Within the 'my portal' application it is possible to create a collection of screens for a specific type of user of the system.

Examples are a general employee, an account manager, a customer, a supplier etc...

The system makes use of special portlets which can be arranged and selected/hidden by the logged on user.

The MyPortal application is an example of what it's possible to do with OFBiz Portal technics (integrated in ofbiz framework)

1. Some Portlet in other components

1.1. The System Event Portlet

This portlet shows changes which happened in the system for the logged on user. The first two functions which are working now:

1. Incoming communication events (email, internal notes).
2. Tasks which are assigned either in projectmanager or workeffort.
These event can be notified to the user even when not logged on to OFBiz by using a firefox plugin and when it changes the employee is notified from within firefox
The plugin: <http://updatescanner.mozdev.org/en/index.html> and it should check the following url: (adjust to your requirements)
<https://localhost:8443/myportal/control/showPortletSimpleDecorator?portalPortletId=SystemInfoNotes&USERNAME=admin&PASSWORD=ofbiz>
In the Flat Grey theme (only) notifications show in the header when they are available.

1.2. The Calendar Portlet

This portlet provides an overview on a daily/weekly/or month period. You will see the particular view with the ability to add an event.
